## Hot Number | By Kate Abney |

Gone are the days of trekking to the woods, chopping down a tree and lugging the spoils back home to set aflame with newspaper kindling. OK, so maybe we are living in an age of neo-rusticism, but sometimes you just need a more streamlined way to heat things up. Enter our compendium of contemporary fireplaces. From an oil lamp installed on a slab of slate to bioethanol-burning beauties engineered to radiate warmth without spewing smoke, soot or sparks, these blazers will look just as good accenting your living room as commanding those priceless patio views. ■
